## The l3pdfdict module—tools for PDF dictionaries LATEX PDF management testphase bundle

The LATEX Project\*

Version 0.95t, released 2022-11-03

#### 1 **13pdfdict** documentation

Many PDF objects are or contain dictionaries—structures containing a number of (pdf-)name/value pairs. Examples are attributes of links, filespec dictionaries, xform dictionaries, the catalog, the info dictionary. The commands in this module offer an number of tools to handle such dictionaries. The module setups a name space for the dictionary names and offers some commands to output dictionaries.

The dictionaries work in many respects like property lists with a few PDF specific changes:

- The keys are always converted with \str\_convert\_pdfname:n to get a correct PDF name;
- a key with a empty value can not be added, it will be ignored;
- there is a dedicated function to output the property as space separated list with keys with slash: /key1 value1 /key2 value2.

Local and global dictionaries can be created.

### User Commands

\pdfdict\_new:n \pdfdict\_new:n {\dictionary name\}}

Updated: 2020-12-03 This function create a new local or global dictionary. Which one depends on \( \dictionary \) name: If it begins with the standard g the dictionary is global, with 1 the dictionary is local, other starting chars will give an error. It is recommended to begin the name in the standard expl3 naming scheme with one or two underscores and a module name, so g\_module\_XXXX or g\_\_module\_XXXX.

New: 2020-06-16 This functions copy  $\langle dictionary\ name_2 \rangle$  into  $\langle local/global\ dictionary\ name_1 \rangle$  locally or Updated: 2020-12-03 globally. If the dictionary  $\langle local/global \ dictionary \ name_1 \rangle$  doesn't exist yet, it will be created. If  $\langle dictionary\ name_2 \rangle$  doesn't exist yet, an error will be raised.

<sup>\*</sup>E-mail: latex-team@latex-project.org

\pdfdict\_put:nnn  $\pdfdict_put:nnn {\langle local dictionary \rangle} {\langle name \rangle} {\langle value \rangle}$ New: 2020-04-06 This function puts key  $\langle name \rangle$  and value  $\langle value \rangle$  locally or globally in the  $\langle dictionary \rangle$ created with  $\pdfdict_new:n. \{(name)\}\$  should be a PDF Name without the starting slash. It will be stored with \str\_convert\_pdfname:n, so will be automatically correctly escaped in case it contains slashes, spaces or other chars not allowed in a PDF name.  $\langle value \rangle$  should be a valid PDF value for this name in the target dictionary. The value is neither converted nor escaped automatically. If the value is blank nothing is added to the dictionary. When adding a value keep in mind that the expansion behaviour of the backends differ. Some backends expand a value always fully when writing to the PDF, with other backends commands could end as strings in the PDF. This makes controlling the expansion quite tricky. It is better to not rely on  $\langle value \rangle$  to be expanded nor not expanded by the backend commands.  $\pdfdict_item:nn * \pdfdict_item:nn {\langle key \rangle} {\langle value \rangle}$ New: 2020-12-04 tionaries in mapping commands. The command doesn't do any escaping, it expects that the name has been escaped when the value has been stored into the dictionary. If the value is blank nothing is output. The command is expandable if the content is it. \pdfdict\_use:n \* \pdfdict\_use:n {\dictionary\} Updated: 2020-12-03 This outputs the property list of the dictionary as a list of /key value pairs. This can be used e.g. when writing a dictionary object with \pdf object write:nnx \pdfdict\_show:n \pdfdict\_show:n {\dictionary\} Updated: 2020-12-03 This shows the content of  $\langle dictionary \rangle$  in the log and on the terminal.  $\verb| \pdfdict_if_exist_p:n * \pdfdict_if_exist:n { | \qctionary | }$ \pdfdict\_if\_exist:n $\overline{\mathit{TF}}$  \* This tests if the dictionary exists. Updated: 2020-12-03  $\verb| \pdfdict_if_empty_p:n * \pdfdict_if_empty:n { | \qctionary | }$ 

\pdfdict\_get:nnN \pdfdict\_get:nnN {\langle dictionary \rangle} \{\langle name \rangle} \langle t1 var \rangle

New: 2020-07-06 Recovers the \langle value \rangle stored by \pdfdict put:nnn or \pdfdict

Updated: 2020-12-03

New: 2020-07-06 Recovers the  $\langle value \rangle$  stored by  $\pdfdict_put:nnn or <math>\pdfdict_gput:nnn for \langle name \rangle$  and places this in the  $\langle token \ list \ variable \rangle$ . If  $\langle name \rangle$  is not found then the  $\langle token \ list \ variable \rangle$  is set to the special marker  $\pdfdict_gput:nnn or \pdfdict_gput:nnn for <math>\langle name \rangle$  and places this in the  $\langle token \ list \ variable \rangle$  is not found then the  $\langle token \ list \ variable \rangle$  is first converted with  $\pdfdict_gput:nnn for <math>\langle name \rangle$  and places this in the  $\langle token \ list \ variable \rangle$  is set within the current  $\pdfdict_gput:nnn for <math>\langle name \rangle$  and places this in the  $\langle token \ list \ variable \rangle$  is set within the current  $\pdfdict_gput:nnn for <math>\langle name \rangle$  and places this in the  $\langle token \ list \ variable \rangle$  is set within the current  $\pdfdict_gput:nnn for <math>\langle name \rangle$  and places this in the  $\langle token \ list \ variable \rangle$  is set within the current  $\pdfdict_gput:nnn for <math>\langle name \rangle$  and  $\pdfdict_gput:nnn for <math>\langle name \rangle$  and places this in the  $\langle token \ list \ variable \rangle$  is set within the current  $\pdfdict_gput:nnn for <math>\langle name \rangle$  and  $\pdfdict_gput:nnn for <math>\langle name \rangle$  and  $\pdfdict_gput:nnn for <math>\langle name \rangle$  is first converted with  $\pdfdict_gput:nnn for <math>\pdfdict_gput:nnn for \pdfdict_gput:nnn for <math>\pdfdict_gput:nnn for \pdfdict_gput:nnn for \pdfdict_gput:n$ 

```
\pdfdict_gremove:nn \pdfdict_gremove:nn {\langle global dictionary \rangle} {\langle name \rangle}
```

Updated: 2020-12-03 Removes  $\langle name \rangle$  and its associated  $\langle value \rangle$  from the  $\{\langle dictionary \rangle\}$  The removal is local from local dictionaries and global from global dictionaries. If  $\langle name \rangle$  is not found no change occurs, i.e there is no need to test for the existence of a name before trying to remove it.  $\langle name \rangle$  is first converted with \str\_convert\_pdfname:n.

## 2.2 Creating dictionaries

```
\g__pdfdict_names_seq
\g__pdfdict_gnames_seq
```

Two seq to store the used names for diagnostics.

```
39 \seq_new:N \g__pdfdict_lnames_seq
40 \seq_new:N \g__pdfdict_gnames_seq
```

 $(End\ definition\ for\ \g_pdfdict_names_seq\ and\ \g_pdfdict_gnames_seq.)$ 

\\_\_pdfdict\_name:n \\_\_kernel\_pdfdict\_name:n \\_\_pdfdict\_new:n \pdfdict\_new:n This are the commands to create new dictionaries and to access their internal name. All internal names start with g\_pdfdict\_/ or l\_pdfdict\_/.

For the other modules we also need a kernel command to access the internal name to speed up the code and allow the use standard commands of the prop module to deal with the dictionaries. For example

```
\prop_clear:c { \__kernel_pdfdict_name:n { name }}
41 \cs_new:Npn \__pdfdict_name:n #1 % #1 dictionary name
43
       \str_head:n{#1}__pdfdict_/#1_prop
44
  \cs_set_eq:NN \__kernel_pdfdict_name:n \__pdfdict_name:n
45
   \cs_new_protected:Npn \__pdfdict_new:n #1
47
48
       \__pdfdict_if_exist:nTF { #1 }
49
50
           \msg_error:nnxx
51
             { pdfdict }
             { dict-already-defined }
             { \tl_to_str:n {#1} }
55
             { \__pdfdict_get_type:n{#1} }
          }
56
57
            \str_case_e:nnF { \str_head:n{#1} }
58
              {
59
                 {g}
60
61
                     \prop_new:c { \__pdfdict_name:n { #1 } }
62
                     \seq_gput_right:cn {g__pdfdict_gnames_seq} { #1 }
63
                }
                {1}
65
                 {
                     \prop_new:c { \__pdfdict_name:n { #1 } }
67
                     \seq_gput_right:cn {g__pdfdict_lnames_seq} { #1 }
68
                }
69
